

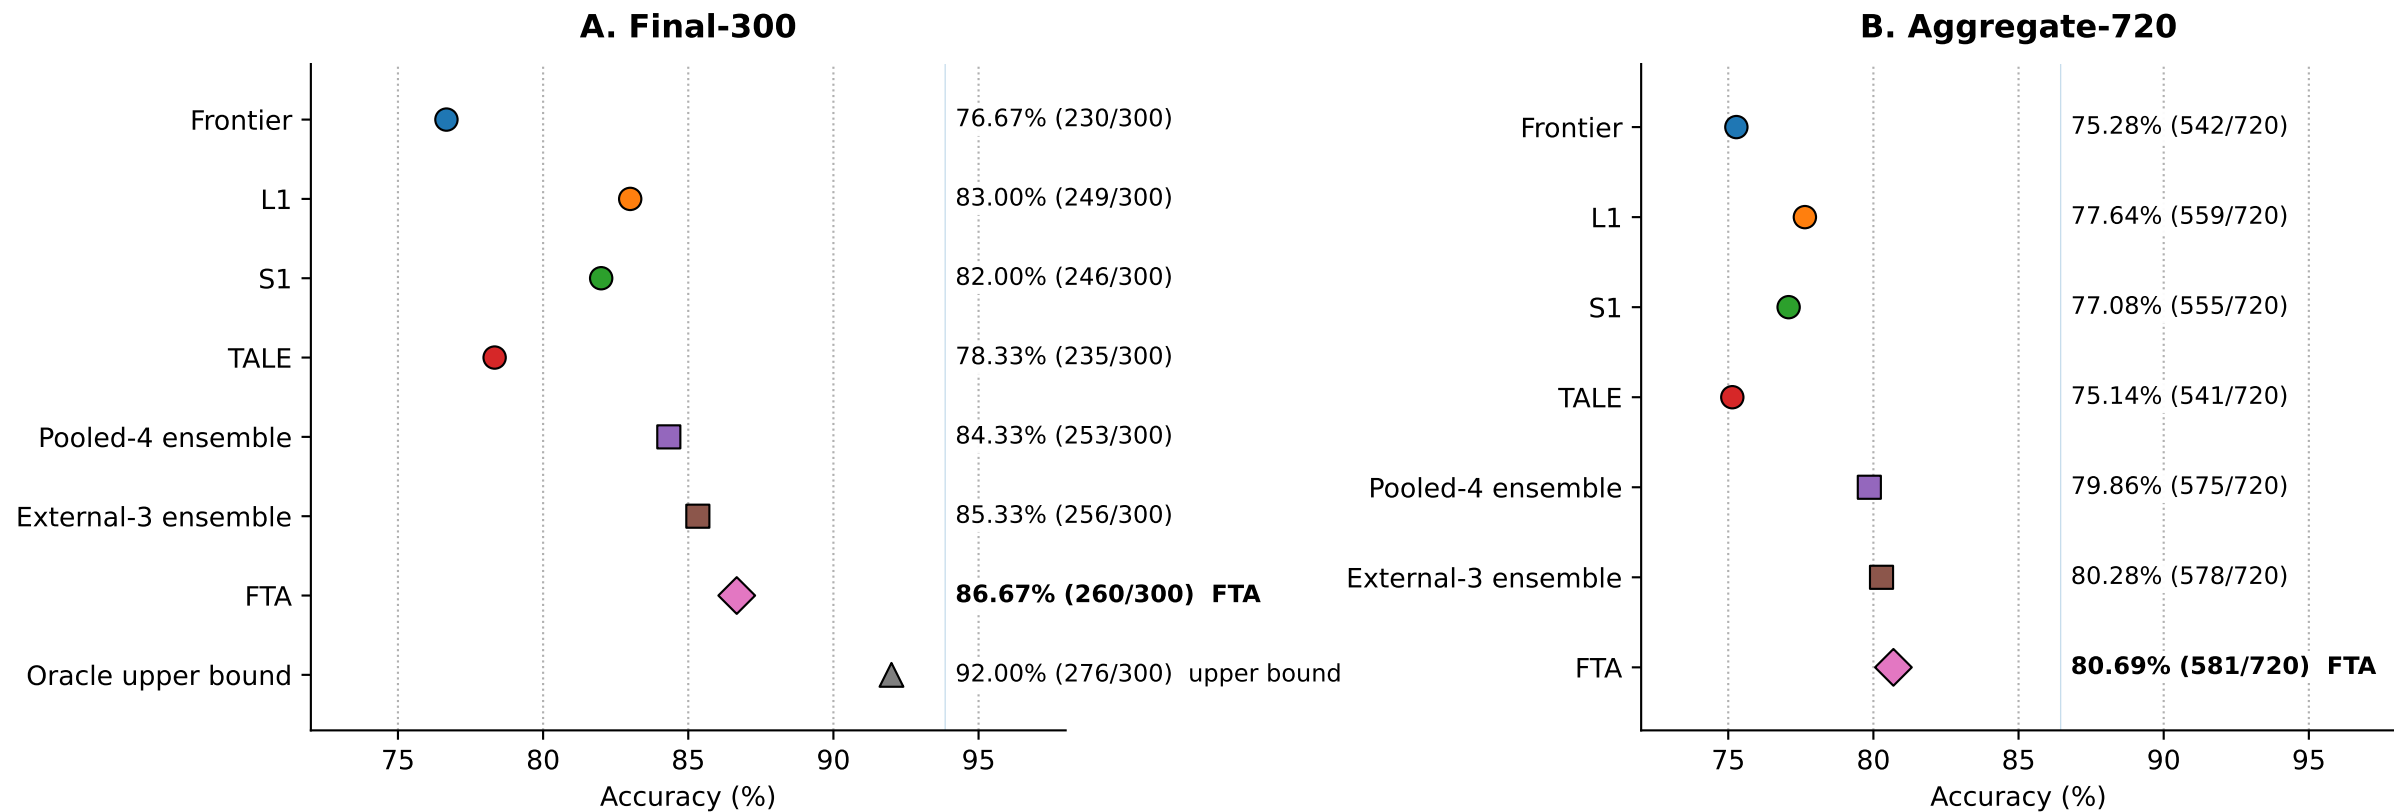

Figure 2. Main quantitative comparison on Cohere × GSM8K

Oracle is shown only as an upper bound.

Aggregate-720 oracle was not available in canonical artifacts.

Markers show verified accuracy. FTA is not claimed to be statistically separated from the pooled ensemble: FTA-minus-Pooled-4 bootstrap CIs include zero (Final-300: [-0.67, +5.67]; Aggregate-720: [-1.11, +2.78]).

Method markers: circles = fixed policies, squares = ensembles, diamond = FTA, triangle = oracle upper bound.
